

Bullhorn Asset Tracker BAT™ / BAT™mobile

Bullhorn Asset Tracker (BAT™) is American Innovations' powerful and secure web-based asset management interface for the Bullhorn® Remote Monitoring System. The Bullhorn system monitors and collects data from oil and gas, water and wastewater and agricultural industry assets and provides immediate notification of alarm conditions by voice, e-mail and/or text. BAT™mobile provides users with on-the-go access to BAT in a smartphone optimized format and BAT™txt allows customers to communicate with units in low signal areas via text message. The BAT™Cloud ensures that data and backups are safely stored, communicated and seamlessly shared with other devices and applications.

Features	Benefits
User-defined dashboard summary of overall and individual unit performance	Immediate visibility of units in "alarm", "normal", "interrupting", "inactive" modes
Pre-set and custom "user profile" settings	View units/status based on job type and industry
Track any combination of units and assets (i.e. equipment monitored by one or more BH)	Determine overall performance of assets
Customized unit data reports	Reports can include data points for units & unit groups, date ranges, by unit or asset type
Pig tracking application	Real-time view of specific "events" (e.g. those related to a pipeline pig) over the entire system
US-based data center with disaster recovery, encrypted password, double-layer firewall and no code outsourcing. All data and backups stored in AI's BATCloud	Secure communications, data & backups (18 months) storage via proven backend system
Automatic data extracts to external databases	Scheduled data exports to PCS Cathodic Protection Data Manager
Unit Set-up wizard for new & replaced units	Replace one unit with another and reassign data history & other properties
BATmobile & BATtxt	Anywhere, anytime communication with BAT

BATCloud: Ensures that data and backups are safely stored, communicated and seamlessly shared with other devices and applications. The US-based data center features disaster recovery, encrypted password, double-layer firewall and no code outsourcing.

Services. American Innovations Technical Service Engineers provide: Technical support via phone and email | Bullhorn Installation Services | Customer training (on-site and in the AI Austin, TX facility) | Bullhorn Asset Tracker data services | Automated unit information/data available through the Bullhorn Voice hotline and BATtxt

About American Innovations. American Innovations (AI) provides oil and gas companies with critical knowledge and decision support for assets and infrastructure via corrosion protection and integrity management services. The company supplies products and services to automate the collection, storage, and reporting of equipment and pipeline compliance data. Bass Engineering, a subsidiary of American Innovations, offers CP engineering services. Product lines include Pipeline Compliance System, Allegro Field Data PC™, Bullhorn® Remote Monitoring, MicroMax® Current Interrupters, Risk Intelligence™ platform software and Integrity & Compliance Services.
