

Bullhorn Asset Tracker (BAT) is American Innovations' web-based asset management interface for the Bullhorn Remote Monitoring System¹. The Bullhorn system monitors and collects data from oil and gas, water and wastewater and agricultural industry assets

such as gas meters, rectifiers, cathodic protection (CP) systems, compressors, irrigation systems, poultry farm equipment and more, and provides immediate notification of alarm conditions by voice, fax, page, and e-mail.

The **benefits** of using Bullhorn Asset Tracker include:

- **Usability:** Spot potential problems instantly – an intuitive design and easy-to-navigate structure give you the ability to immediately see the health of your assets
- **Flexibility:** Utilize pre-set “User Profiles” to view units and status based on job level and/or industry or create your own
- **Visibility:** Assign one asset to one unit, one asset to many units or many assets to many units or any combination of the above
- **Accountability:** Detailed reports on unit activity and billing plans available online

BAT allows for **immediate, in-depth visibility** to the data gathered and delivered by Bullhorn units installed at any number of sites. Upon secure login, the **Asset Tracker Dashboard** (above) provides an instant overview of overall and individual unit performance and allows customers to see immediately how units are functioning.

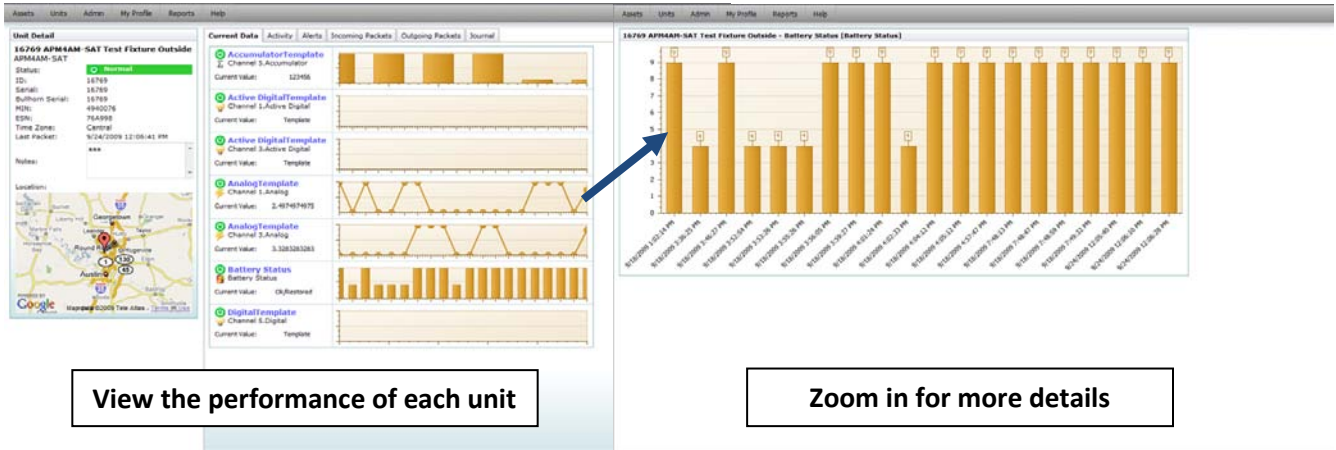

¹Bullhorn Asset Tracker is included with the purchase of any BH unit

Bullhorn Product Data Sheet: Asset Tracker

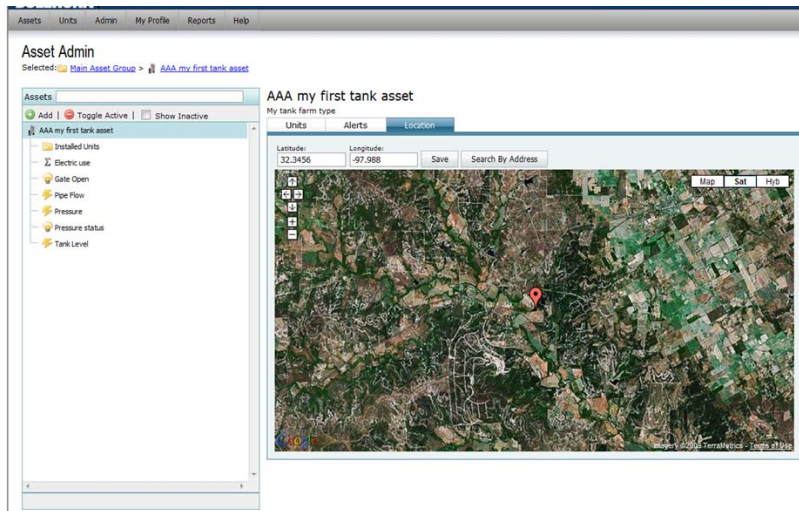

11/17/09

Note: Product specs are subject to change without notice.

System status visually shows how many units are in “alarm” mode so that potential problems can be addressed immediately, as well as “Normal”, “Interrupting” (for those units with a MicroMax® Current Interrupter installed), “Not Installed”, “In Repair” (for units under repair), “Under-reporting” (little activity) and “Over-reporting” (too much activity).

In addition to giving detailed views of how each unit is performing, BAT provides customers the ability to monitor their Bullhorn unit by “assets”. An asset is a piece of equipment that is being monitoring by one or more Bullhorn devices – a rectifier, tank farm, lift station, compressor etc. BAT can track any combination of units and assets you want it to, making it easy to see at a glance how your equipment is performing at any given time (see below).

Bullhorn Asset Tracker is able to generate a number of reports that outline detailed unit data including data points for a unit or unit group, data for a date range selected, data by unit type, data by asset type and more. In addition, a detailed online reporting on each unit’s billing plan and all associated notification charges by month is accessible 24/7 on the site.
