

The **Cathodic Protection Data Manager (CPDM)** module is the industry standard for managing Cathodic Protection data. Whether scheduling routine field data collection, judging system effectiveness, pinpointing problems, prioritizing ground bed construction, or preparing for a regulatory audit, **CPDM is an indispensable tool for cathodic protection professionals.**

CPDM is the flagship module within American Innovations' powerful Pipeline Compliance System (PCS™), an integrated application for managing and analyzing maintenance, compliance and operational data for natural gas, hazardous liquids and other regulated pipeline systems.

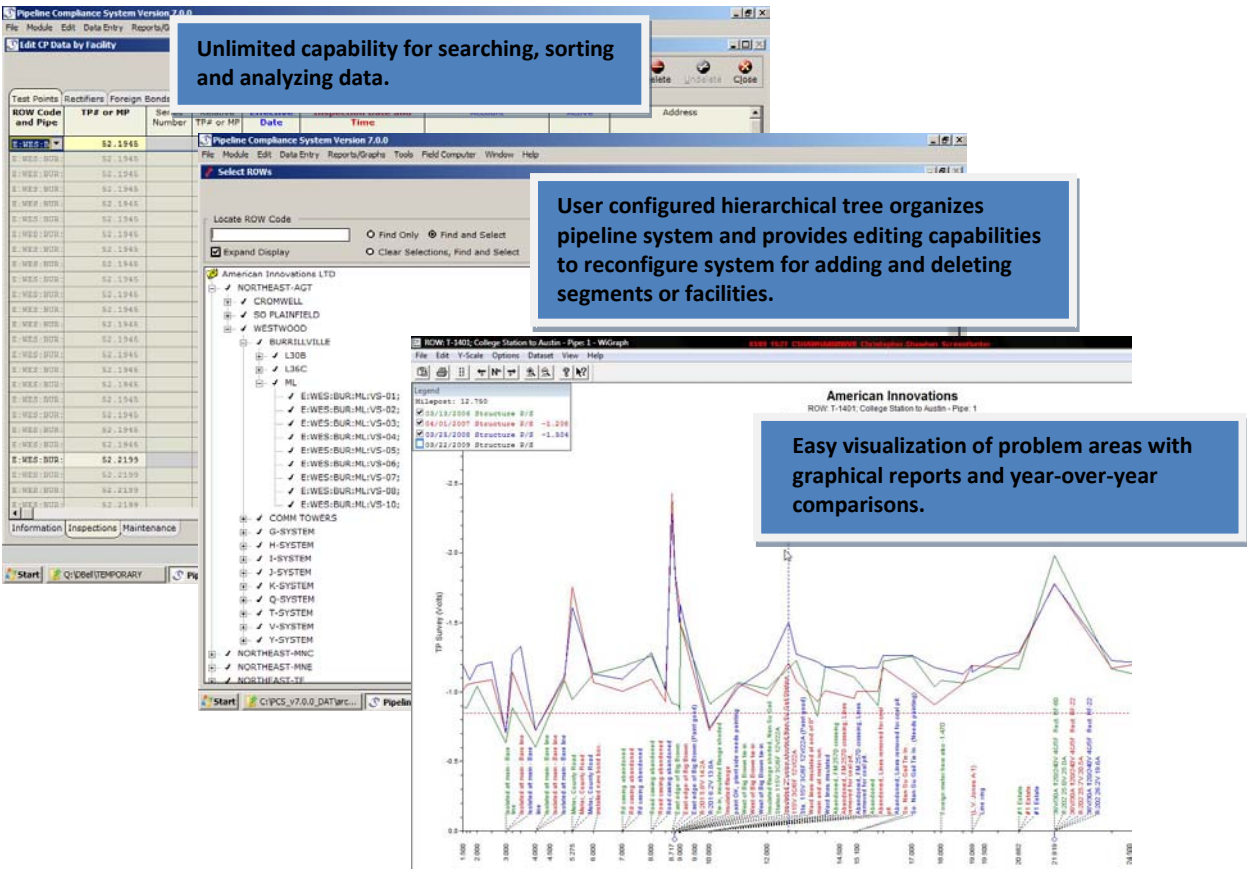

Features

- Flexible data entry (manual or download) and ad hoc reporting
- Easy visualization of problem areas with graphical reports
- Create date-based schedules and order-based routes; user-definable scheduling "rules"
- Manage large quantities of data on asset types and other related maintenance information
- User-selected fields
- User-configured hierarchical tree for organization and editing
- Multi-user design
- Quick generation of comparative line graphs, individual test point, rectifier and bond graphs, or continuous strip charts

Benefits

- Unlimited capability for searching, sorting and analyzing data
- Can generate year-to-year comparisons of pipeline segments
- Efficiently utilize resources with custom surveying routes for all facility types
- See problem areas for test stations, rectifiers, galvanic anodes, foreign bonds, isolated services, tank performance & hundreds of pipeline data fields
- Users determine appearance of data tables
- Easy addition or deletion of segments and facilities
- Provides replication and sync method to share data throughout organization
- Ideal for analyzing distribution and transmission lines

Services. American Innovations PCS Technical Service Department provides software support, training, documentation, and special project services including:

- Implementation services and consulting
- Software and report customization
- Data conversion and hierarchy design
- Data entry & data import to PCS
- Custom Module design (Enterprise customers)

About American Innovations. American Innovations (AI) provides oil and gas companies with critical knowledge and decision support for assets and infrastructure via corrosion protection and integrity management services. The company supplies products and services to automate the collection, storage, and reporting of equipment and pipeline compliance data. Bass Engineering, a subsidiary of American Innovations, offers Cathodic Protection engineering services. American Innovations product lines include: Pipeline Compliance System (PCS), Allegro Field Data PC™, Bullhorn® Remote Monitoring, MicroMax® Current Interrupters, and Integrity Management via Risk Intelligence™ Software and Integrity & Compliance Services.
