

Why Should I Upgrade?

Risk Intelligence Platform (RIPL™) 7.8

With faster performance, more customization options and an improved user experience, RIPL 7.8 offers a number of features that will make you more productive.

Faster Performance

- Section your data more easily with a data grid that loads faster after a segmentation filter is applied.
- Speed through building and running your models, and enjoy runtimes that are significantly faster than in previous versions.
- If you do need to call support, we'll be able to get you back to work faster since RIPL 7.8 includes better data logging that will help us quickly determine what went wrong and how to fix it.

A Better User Experience

- When you upgrade to RIPL 7.8, you'll enjoy a more intuitive user experience that:
 - Prompts you in advance if you don't have the data necessary to run a liquid volume release (LVR) model, so you won't have to worry about receiving errors due to an incomplete data set.
 - Shows you the progress of LVR model runs to give you a better understanding of how long until the model's complete.
 - Can walk you through the steps needed to upgrade your software or database to future versions.
 - Offers improved color coding to make it easier for you to map fields during data imports.

More Customization Options

- Use the database dashboard to add or remove as many charts as you'd like.
- An improved SQL authentication feature allows you to control which users are able to generate LVR calculations.

Why Should I Upgrade?

RIPL V7.8

For More Information

Services

Expect relentless service from our RIPL Technical Services team. We offer:

- Technical support via phone and email
- Product training at your place of business or ours
- Application services including implementation, data collection and loading, system integration, and administration services
