

Why Should I Upgrade?

PCS v7 – 7.7.1

The enhancements and improvements in this latest release of PCS v7 will help your team work more efficiently in the field and the office.

Improve your Allegro files

The *Field Computer Send* component of PCS 7.7.1 allows you to:

- Pre-build sort themes that arrange even address numbers before odd ones so that technicians can complete the surveys in order without having to cross the road after each site visit.
- Send multiple sort themes to the Allegro field computer so that the technician can choose the best sort theme for the task at hand.
- Include searchable fields in your Allegro survey files so that field technicians can easily locate the right facility to inspect by running a search on the Allegro.

Synchronize hierarchy changes with confidence

- In PCS 7.7.1, replica users see only the records that they're assigned, making it much easier for them to view and update the right ROWs.
