

Cathodic Protection Data Manager (CPDM)

Cathodic Protection Data Manager (CPDM) is the flagship module of Pipeline Compliance System and is an indispensable tool for cathodic protection professionals. By managing large quantities of data, CPDM allows users to collect, analyze, report, and act on results across their entire pipeline network.

- Manages multiple facility types and surveys
- Schedules routine field data collection
- Prepares operators for regulatory audits

Cathodic Protection Data Manager

Key Benefits

Flexible data entry (manual or download) and ad hoc reporting

Search, sort, and analyze data quickly

Year-to-year comparisons of pipeline segments

Easy visualization of problem areas with graphical reports

Date-based schedules and order-based routes; user definable scheduling “rules”

Efficiently utilize resources with custom surveying routes for all facility types

Manage large quantities of data on asset types and other related maintenance information

See problem areas for test stations, rectifiers, galvanic anodes, foreign bonds, isolated services, tank performance, and hundreds of pipeline assets

User-configured hierarchical tree for organization and editing

Advanced organization and efficient editing for workflow

Multi-user design for replication and synchronization

Share critical data throughout an organization

Comparative line graphs, individual test point, rectifier and bond graphs, and continuous strip charts

Analyze distribution and transmission lines

Cathodic Protection Data Manager (CPDM) is the flagship module of Pipeline Compliance System (PCS™), the industry leader in managing compliance information collected for natural gas, hazardous liquids, and other underground pipeline systems.

An indispensable tool for cathodic protection professionals, CPDM:

- manages multiple facility types and surveys
- schedules routine field data collection
- judges system effectiveness
- pinpoints problems
- prepares operators for regulatory audits

By managing large quantities of data, CPDM allows users to see problem areas quickly for hundreds of pipeline assets.
