

# Leak Survey Manager (LSM)

Leak Survey Manager is a module within the Pipeline Compliance System (PCS), the industry leader in managing compliance information collected for natural gas, hazardous liquids, and other underground pipeline systems. It is a comprehensive software module that provides users with an easy way to maintain leak survey inspection and repair data, and remain compliant with DOT, PUC and PHMSA rules and regulations.

- Manages multiple pipelines and facilities
- Helps determine overall program effectiveness
- Pinpoints and quantifies problems
- Schedules and documents leak survey data by facility

# Leak Survey Manager

## Key Benefits

### Organize Data

Flexible data entry and ad hoc reporting to enter, search, sort and analyze leak survey inspection data quickly and compare results from year to year.

### Quantify Data

Provides qualitative information with built-in validation tables.

### Scheduling and Routing

Identify, schedule, route and document required as well as follow-up leak survey inspections based on leak classifications.

### Meet Compliance

Visibility into data for audit preparation; 100% verification that surveys were performed with GPS coordinate validation.

### Integrates With Your Other Software Systems

Deployed on a world class client-server database, Microsoft SQL Server, PCS is highly customizable and interfaces with your existing systems including GIS, PODS, workflow management, and risk assessment applications.

### Exceptional Customer Service

Our support team has a combined total of 48 years' experience. We offer superior support, training, and application services that include: system integration, data collection and loading, administration, and optimization.

PCS is designed to help distribution and transmission operators' pipeline management teams collect, analyze, and report pipeline and facility data.

Leak Survey Manager ensures that compliance requirements, defined in DOT 49 CFR Parts 192 and 195, are met by managing valve data including inspections, maintenance, and repair. The module is also an integral part of any Distribution Integrity management Plan (DIMP), assisting in compliance with PHMSA's 74 FR 63906.

In addition to Leak Survey, PCS offers modules for Cathodic Protection, Close Interval Survey, Valve Management, Atmospheric Survey, Internal Corrosion, and Leak Survey. Users expand capabilities by activating needed applications.
