

Valve Manager (VM)

Valve Manager is a module within the Pipeline Compliance System (PCS), the industry leader in managing compliance information collected for natural gas, hazardous liquids, and other underground pipeline systems. It provides users with an easy way to maintain valve inspection and repair data.

Valve Manager ensures that compliance requirements, defined in DOT 49 CFR Parts 192 and 195, are met by managing valve data including inspections, maintenance, and repair. The module is also an integral part of any Distribution Integrity Management Plan (DIMP), assisting in compliance with PHMSA's 74 FR 63906.

- Manages multiple pipelines and facilities
- Helps determine overall program effectiveness
- Pinpoints and quantifies problems
- Schedules and documents valve inspection and repair work

WHY CHOOSE THE VM MODULE?

- ✓ **Organize Data**
Flexible data entry and ad hoc reporting to enter, search, sort and analyze data quickly and compare results from year to year.
- ✓ **Identify Threats**
Pinpoint valve issues to meet compliance and prioritize maintenance.
- ✓ **Scheduling and Routing**
Allows users to quickly identify, schedule, route and document valve and inspection work.
- ✓ **Evaluate Effectiveness**
Standard reports and graphs and user- customizable options are integral to determining overall valve maintenance results.
- ✓ **Meet Compliance**
Visibility into data for audit preparation.
- ✓ **Integrates With Your Other Software Systems**
Deployed on a world class client-server database, Microsoft SQL Server, PCS is highly customizable and interfaces with your existing systems including GIS, PODS, workflow management, and risk assessment applications.
- ✓ **Exceptional Customer Service**
We offer superior support, training, and application services that include: system integration, data collection and loading, administration, and optimization.
